## 24" MOBILE TAP HP24TS

### BEER BASICS – TROUBLESHOOTING INFO

When you're expecting a full-bodied brew, a foamy or flat beer just won't do. If you experience excessive foam or no foam at all, chances are there is a quick and easy fix that will get you back to pouring the perfect beer in no time. Below are some of the most common beer dispenser problems and their solutions.

#### PROBLEM: No beer is coming out of the tap

- **Check the gauge** to see if there is any pressure showing. It should read between 10-12 lbs. If not, your CO2 tank may be empty.
- **Is the shut-off valve in the vertical (on) position?**  
*Note: Diagram shows the valve in the off position (horizontal).*

#### PROBLEM: Flat beer

- **Check the gauge.** Is the pressure between 10-12 lbs? If not, turn the pressure up to its appropriate level. Low pressure can cause beer to flatten and pour slowly.
- **Dirty glassware will cause the head on a beer to quickly disappear.** Make sure your glassware is free of impurities before pouring.

#### PROBLEM: Foamy beer

- **Check the gauge.** Is the pressure between 10-12 lbs? If not, turn the pressure down to its appropriate level. Pressure that is too high can cause beer to overcarbonate in the keg and pour foamy.
- **Is the unit plugged in and cold?** Is the keg cold or, if purchased at room temperature, has it been in the dispenser for at least 24 hours? Attempting to tap a warm keg in a refrigerated unit will cause excessive foaming. Keep the temperature in the unit 36°-42°F, and make sure the keg is properly chilled before tapping.
- **Have you cleaned the equipment lately?** Regular cleaning of the system – from faucet to keg coupler – is important to keep beer stone, bacteria, and mold from building up. The factors listed above can quickly ruin a perfect brew!
